SUMMARY

I am interested in building practical digital solutions and solving user and business problems. I am ambitious with system analysis, system and database design, and cloud computing infrastructures. Aspiring with collaborative and adaptability values, with the initiative to learn quickly, communicate clearly, and turn requirements into solutions.

PROJECTS

Team Leader | University Project

TUKAKU — REPAIR & MAINTENANCE SERVICE

Digital service concept connecting customers with tradespeople for repair and maintenance work.

- Designed service flows for tradesperson listings, profiles, reviews, service selection, booking, payments, and order history.
- Created interface and presentation materials in Figma and Canva, including customer messaging and profile management.

Team Leader | University Project

COPYIN — DIGITAL PRINTING & STATIONERY SERVICE

Mobile service concept connecting customers to printing, copying, stationery orders, and nearby outlets.

- Mapped customer steps for shop discovery, file submission, print specifications, product selection, delivery, and order history.
- Documented requirements and workflows with use cases and data-flow, class, sequence, and activity diagrams; designed customer screens in Figma.

System Design and Infrastructure

MOJO — UTBK/SNBT LEARNING PLATFORM ↗

UTBK Learning platform skill tree based with infinite like UTBK type practice questions

- Designed database structure, API connections, and system flow linking the skill map, drill catalog, and practice sessions.
- Planned for cloud deployments and system components architecture into one unified microservice infrastructure

System Design and Infrastructure 06/2026 - 09/2026

SENTRI — CYBERSECURITY TRAINING PLATFORM |

AI assisted training for workplace email, password, and sensitive-data security decisions.

- Designed a PostgreSQL data model for companies, employees, training content, assignments, attempts, results, and learner progress.
- Set up Docker services for AWS EC2 deployment through Coolify and coordinated integration across multiple applications into an infrastructure .

SKILLS

Programming

SQL, Javascript, CSS, HTML, Python

Tools and Platform

Visual Studio Code, Microsoft Excel, Neon Database, Oracle Database, Figma, Coolify, AWS EC2, Docker, PostgressSQL

CERTIFICATES

AWS Academy Graduate - Cloud Foundations - Training Badge ↗ 05/2026 - Present

AWS

Earners of this badge have taken the AWS Academy Cloud Foundations course.

Azure AI Basic Fundamental 05/2025 - Present

Microsoft

Completed Azure AI Basic fundamental training
